

10 Series 1007 RLW

sku: 15478-V

DESCRIPTION

The AR Blue Clean 10 Series 1007 RLW is the professional high pressure washer equipped with a **3-phase induction motor** and three-cylinder ceramic piston pump with brass head-connecting rod system, ensuring high performance and durability.

With a maximum pressure of 230 bar, a flow rate of 900 l/h and 7.4 kW, it is ideal for **very frequent cleaning jobs** requiring maximum performance, like in the **construction, automotive, car wash, agriculture and livestock farming** sectors.

The **pressure** can be adjusted according to cleaning requirements and can be constantly monitored by means of the **pressure gauge**.

The **built-in detergent suction** system with 3-litre tank and **adjustable suction** is ideal for extended work sessions.

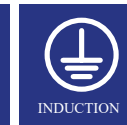

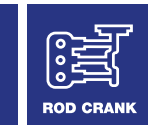

The sturdy **steel trolley** with rubber **wheels** and **ergonomic handle** ensures greater manoeuvrability and easy movement even on bumpy terrain. The practical and ergonomic **hose reel kit** supplied simplifies the use and storage of the high pressure hose.

The professional accessories included in the package, to be connected via a threaded brass connection, are:

- one **15 m steel-braided reinforced high pressure hose**;
- one **high pressure trigger gun** with safety catch, metal core and **swivel** By rotating around its own axis, this trigger gun-hose fitting prevents twisting, kinking and excessive bending of the hose, prolonging its life and making work much faster and more efficient;
- one **lance** with a steel high/low pressure wash nozzle (56 cm) to be connected to the high pressure washer’s trigger gun via a threaded screw connection;
- one **nozzle** which must be fitted onto the end of the lance, for discharging the high pressure water.

This high pressure washer is equipped with **Total Stop System Timed**, a system particularly suited for situations where the high pressure washer is subject to multiple starts and stops. When the gun trigger is released, the machine goes into by-pass

TECHNICAL PROPERTIES

PERFORMANCE

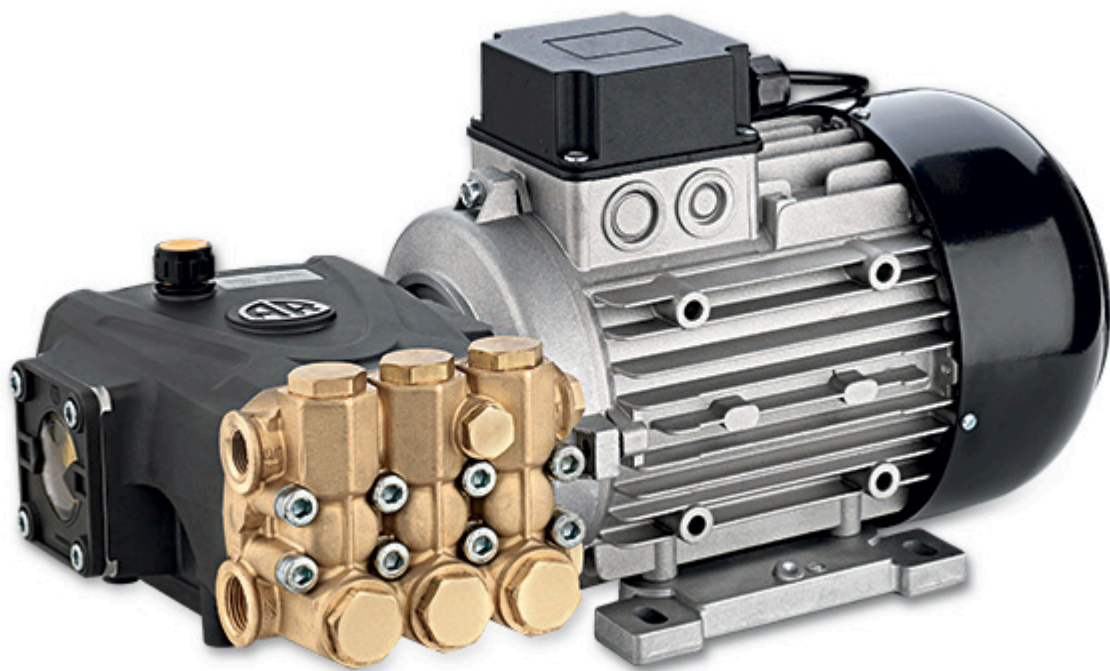

mode for 20 seconds and ensures immediate restarting within this period of time. This leads to less wear and tear on the power unit and a lower consumption of electricity. After 20 seconds, the machine switches to Total Stop mode.

The **self-priming function** allows water to be used directly from a container, such as a tank, without the need for a direct connection to the water supply. To take advantage of this feature, the level difference between the machine's water inlet and the minimum water level of the tank (head) must not exceed 0.5 m. It is even better if the water level in the tank is at or above the high pressure washer's water inlet level.

TECHNICAL PROPERTIES

AR Code	15478-V
Max pressure (bar)	230
Max flow rate (l/h)	900
Absorbed power (kW)	7,4
Revolutions / min (rpm)	1450
Voltage (V)	400 3~

HRR

- Triplex pump with ceramic pistons and connecting rod system with brass pump head
- Automatic by-pass valve with pump head pressure discharge
- Three-phase induction motor with thermal protection
- Remote control for total shut-down of high pressure washer
- Time delayed auto stop/start with stop for motor overloading
- Inlet water suction from tank by self priming function

STANDARD ACCESSORIES
